The National Geospatial-Intelligence Agency's

Mobile Awareness GEOINT Environment

MAGE

MAGE is a dynamic, secure, mobile situational awareness platform that can be rapidly deployed and customized for teams and events. MAGE remains functional even for low-bandwidth and disconnected users.

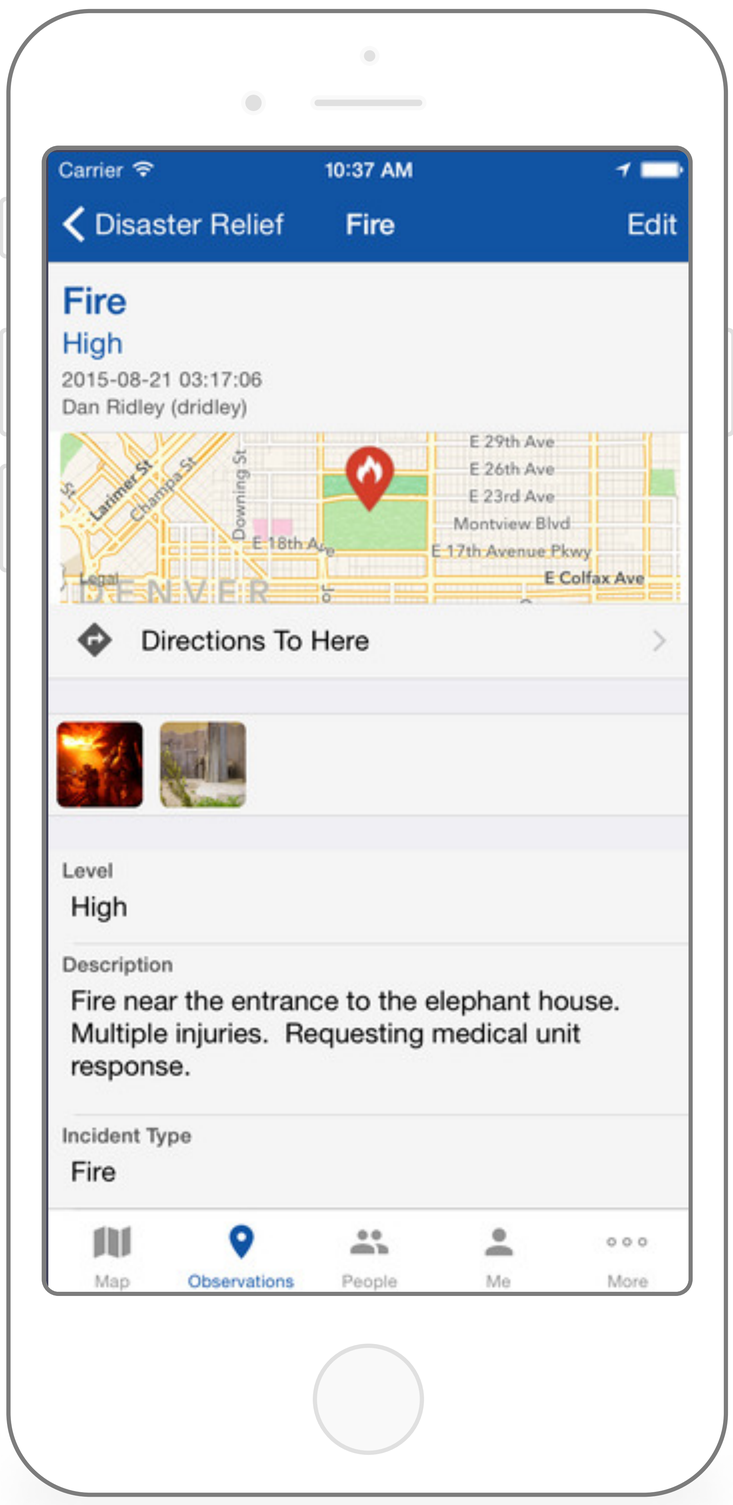
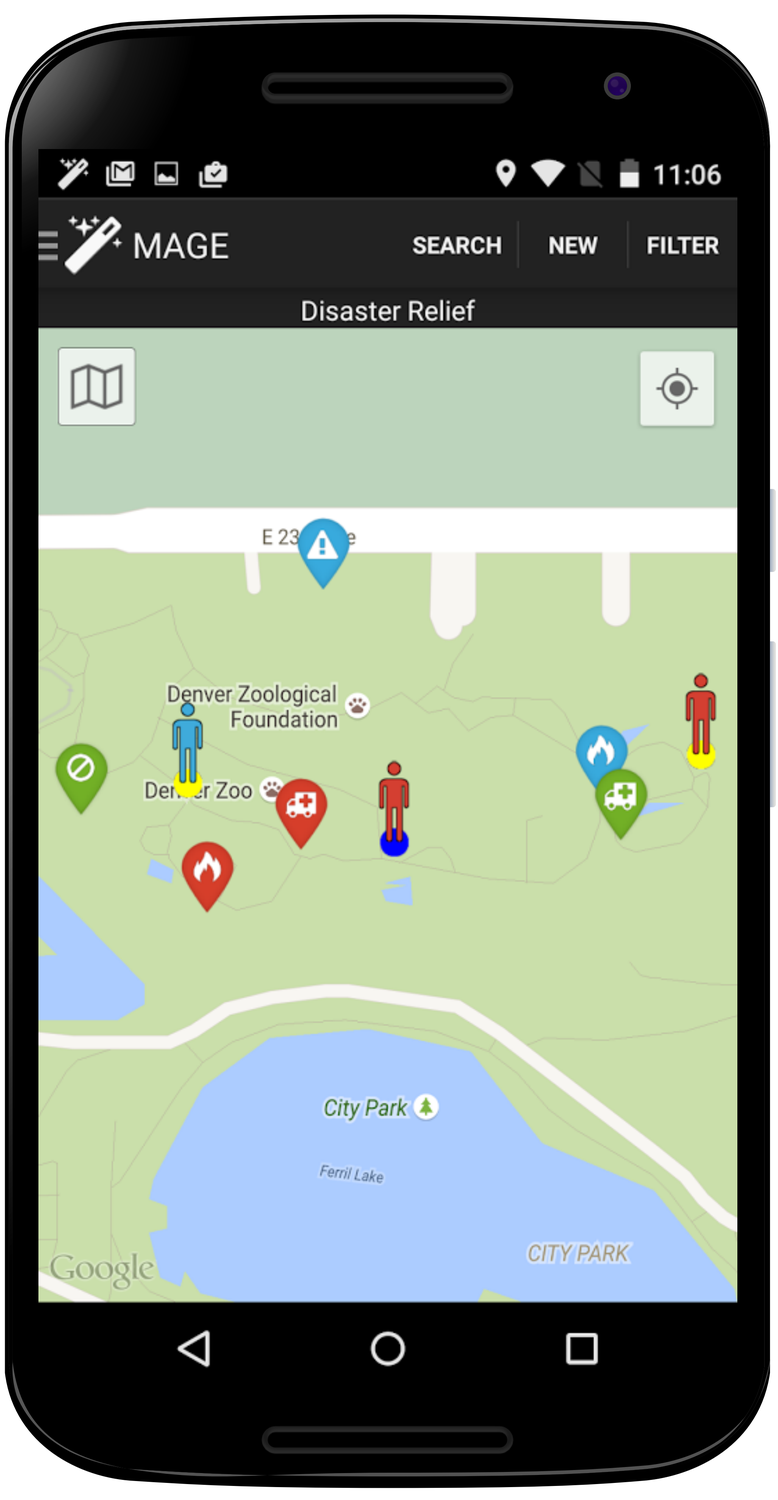
mage@nga.mil

Collaborate with Team Members

MAGE allows you to create geotagged field reports and observations that contain media such as photos, videos and voice recordings and share them instantly with other members of your team.





Share Your Location

Using the GPS in your mobile device, MAGE can record your locations in real time. Your locations can be automatically shared with the other members of your team.

Customizable

Observation fields are fully customizable and can be tailored to your team's unique situation.

Works Offline

The app remains functional if your mobile device loses its network connection and will upload its local content when a connection is reestablished.

Available on Google Play & Apple App Store
